Education

IGCSE certificate, Cairo
Manarat Alfarouk School Graduated: August 2021

Misr International University (MIU), Cairo
Computer Science Graduated: July 2025
Focus: Software Engineer (Full-stack development)

Experience

Hotdesk, Back-end, Hybrid
QR door access control (Dahua DSS integration) Oct 2026

- Built the backend of a QR door access feature, so a guest can open the venue's doors with a QR code linked to their booking, integrated with the **Dahua DSS** access control system.
- Developed the host and guest REST APIs, and delivered the guest's QR code in the app and inside the booking confirmation email.
- Granted and revoked door access automatically when a booking is confirmed, updated, or cancelled, running these calls on a dedicated **Celery** queue and worker so a slow device never blocks a booking.
- Wrote a reconcile command that runs every 15 minutes on an **AWS** schedule to repair any access that no longer matches its booking.
- Wired the feature with **Unleash** for a safe rollout to staging and production, and went through several code review rounds with my seniors.
- Technologies used: **Python, Django REST Framework, Celery, AWS SQS, Dahua DSS API, Postman, Unleash, and PostgreSQL**.

Hotdesk, Back-end, Hybrid
Listing search with Typesense Sep 2026

- Built a **Typesense** search index for listings and workspaces to give users fast, typo-tolerant search instead of heavy database queries.
- Indexed the availability derived from bookings, so the search shows how many seats are free each day at every venue.
- Kept the index in sync automatically whenever a booking or listing changes, and wrote a full rebuild command that is safe to run more than once.
- Added slugs to the indexed documents to build clean detail page links.
- Technologies used: **Python, Django, Typesense, Celery, PostgreSQL, and Docker**.

Hotdesk, Back-end, Hybrid
Third-party provider integrations (IWG / Regus, Dahua) 2026

- Integrated external providers' APIs and SDKs into our platform, including **IWG (Regus)** workspace bookings and the **Dahua DSS** access control system.
- Read and understood each provider's documentation, then tried every endpoint in **Postman** before writing the integration code.
- Organized the requests into collections and environments in a shared **Postman workspace** so the team can reuse and test them.
- Extended the IWG integration: add-ons selection at the quote step, availability that respects IWG's allocations, and safe booking releases and payment top-ups.
- Technologies used: **Python, Django REST Framework, Postman, Swagger (OpenAPI), and REST APIs**.

Hotdesk, Back-end / DevOps, Hybrid
Cloud operations on AWS and Docker 2026

- Created and configured **Celery** task queues on **AWS SQS** and scheduled recurring tasks with **AWS EventBridge**.
- Ran one-off tasks on staging and production (database migrations, data backfills, and rating recomputes) on **ECS Fargate** from **AWS CloudShell**, following runbooks I wrote.
- Investigated **ECS** cluster memory issues and a staging outage using **CloudWatch** logs and metrics, and verified providers' integration behaviour from production logs.
- Developed and tested inside **Docker** containers using **Docker Compose** (API, PostgreSQL / PostGIS, Redis, and Unleash), and upgraded our base image to Debian 12 with GitLab CI building and pushing it.
- Technologies used: **AWS (ECS, Fargate, SQS, EventBridge, CloudWatch, CloudShell, RDS), Docker, GitLab CI, Celery, and Redis**.

Hotdesk, Front-end, Hybrid
Product Analytics Funnels March 2026

- Developed analytics Funnels to track the user's activity around the Web application to know each detail in user's activity.
- Documented a DD for this feature and reviewed by my seniors and CTO.
- Developed functions that track which page the user visited (including the source how he went to this page **ex. navBar or external URL**) and what action was taken (including all buttons, searches, or requests) in this page.
- Used **Posthog** and **Firebase** to store the data I extract to be viewed later by a data engineers.
- Used design patterns to make the code less complex and flexible to add any other functions in the future in case we added new page or buttons.
- Technologies used: **TypeScript, Posthog, Firebase, React**.

Hotdesk, Front-end, Hybrid
Implement new project structure with new libraries Febraury 2026

- I was responsible to make researches on the best project structure and document how it will work with our vision and why this structure was choose.
- Decided to take **scr** project structure to be our new one. which will make our code more reusable, clean, less complex and clean. I focused on components folder as I devided it into three sub folders (raw (from Shadcn), shared (components that are made from raw material), and layout (global like navBar)) to achieve the cleanest logic between the components.
- Coded and organized the structure with the latest version of all libraries we will use after an approval from our CTO.
- Decided to use **Shadcn with Tailwind CSS for customization** instead of the libraries we got to use like (MUI, Bootstrap, and SCSS)
- Documented a DD for this feature and reviewed by my seniors and CTO.
- Presented my documentation in front of my Senior engineers, product manager, and CTO.
- Materials and technologies used: **AI search tools, libraries docs, Shadcn, pnpm to run and initialize the project, Next.js, and typrescript**.

Hotdesk, Hybrid
Apple-pay and Google-Pay integration Dec 2025 - Jan 2026

- I was responsible to integrate **Apple Pay** and **Google Pay** with our application using **Stripe** for booking and subscription payments.
- Documented a DD for this feature and reviewed by my seniors and CTO.
- Implemented a radio button to choose apple pay or google pay and wire them with **Remote config** keys in order if we want to hide the feature.

- Add a validation that make sure the user's browser support apple pay (Safari) and that the user has apple pay wallet.
- Integrate the Apple SDK and Google JS SDK and wrapped them with stripe according to the docs and that this is the best approach.
- Technologies used: Firebase Remote config, stripeJS, TypeScript, Apple SDK, Google Pay SDK and Nextjs.

Hotdesk Host Portal, Hybrid
Implement Invoice feature in Hotdesk Host Portal app 2025

- Designed and implemented Invoice feature according our Figma design screens.
- Documented a DD for this feature and reviewed by my seniors and CTO.
- Wired the feature button with **Unleash** in case we want to hide this feature temporarily.
- Integrated with backend using Our own **Hotdesk SDK** that make it easy to call our backend apis. Also used **Swagger** as a reference what the Apis request and there response's format.
- Implemented the feature using Angular.
- Technologies used: Unleash, Angular, Swagger, Hotdesk SDK, SCSS, and Typescript.

Hotdesk Host Portal, Hybrid
Implement Promo-code feature in Hotdesk Host Portal app 2025

- Implemented all the screens of this feature (all CRUD operations screen as well).
- Documented a DD for this feature and reviewed by my seniors and CTO.
- Designed and implemented Promo code feature according our Figma design screens.
- Wired the feature button with **Unleash** in case we want to hide this feature temporarily.
- Integrated with backend using Our own **Hotdesk SDK** that make it easy to call our backend apis. Also used **Swagger** as a reference what the Apis request and there response's format.
- Implemented the feature using Angular.
- Technologies used: Unleash, Angular, Swagger, Hotdesk SDK, SCSS, and Typescript.

Freelancing, Full-stack, UI/UX, Remotely
Support Ariatoon web application 2025

- Redesign the dashboard of admin using Shadcn library.
- Implement in-app purchase contents.
- Integrate the application with Paypal and Stripe.
- Used **Cloudinary** as this application was focused on uploading novels and images so I needed something to handle this on cloud to make the server smoothly better.
- Implemented using **React vite** as frontend and **GO** for the backend.
- Technologies used: React vite, GO, Cloudinary, Docker, Shadcn, and Typescript.

Freelancing, Full-stack, Remotely
Almajdouie Foundation website and CMS June 2026 - Oct 2026

- Developed the whole project end to end on my own as a full-stack developer, from the Figma design to the database, admin dashboard, deployment, and launch, for a Saudi charitable foundation.
- Built a bilingual public website (**Arabic-first with RTL layout** and an English toggle) with 25+ pages, light/dark themes, and an interactive mosque map.
- Built an admin dashboard (CMS) that manages 20+ content types with three staff roles, secured by **Supabase** PostgreSQL Row Level Security, with private file storage for job applications and complaints.
- Worked on **SEO**: metadata and canonical tags, **sitemap.xml**, **robots.txt**, **JSON-LD** structured data, link previews, and 301 / 410 redirects from the old site's URLs to keep the search ranking after the migration.
- Deployed on **Vercel** and **Cloudflare Workers** (OpenNext) with **GitHub Actions**, added Vercel Web Analytics, and wrote frontend, backend, and production-readiness handover documents.
- Technologies used: **Next.js, React, TypeScript, Tailwind CSS, Shadcn, Supabase (PostgreSQL), MapLibre, Vercel, Cloudflare Workers, and pnpm**.

Certificates

Oracle 12C developer Jan 2026 — Remotely
Certificate of Training
Learned: Introduction to Telecommunications, Embedded system, Public Safety Communication, Microwave and Broadband Communication, Fiber Optics, Communication, CCTV, Practical Workshop

Motorola (Systel telecom) Summer 2024 — On site
Certificate of Training
Learned: Introduction to Telecommunications, Embedded system, Public Safety Communication, Microwave and Broadband Communication, Fiber Optics, Communication, CCTV, Practical Workshop

ITIDA Summer 2024 — Remotely
Certificate of Training
Soft Skills: Communication Skills, Interview Skills, Presentation Skills, Leadership Skills, Teamwork Skills, Decision Making, Problem Solving, Time Management, Freelancing Skills, Introduction to Information Security and Privacy

Skills

Languages: Fluent in Arabic & English

Programming Languages & Frameworks

- **Frontend:** HTML/CSS, JavaScript, TypeScript, Flutter, Dart, React vite, Next js, Angular, Shadcn, Tailwind, Bootstrap, Remote configs, Unleash, and SCSS.
- **Backend:** Python, Django, Django REST Framework, Celery, C++, C#, .NET, Node.js, Java, PHP, Spring Boot, and GO.
- **Databases & Search:** SQL, PostgreSQL (PostGIS), Redis, Typesense, NoSQL (e.g., MongoDB), Supabase, Firebase, and Posthog.
- **Concepts:** Object-Oriented Programming (OOP), Design patterns, REST APIs, Background tasks & message queues.

Developer Tools

- **Version Control:** Git, GitHub, GitLab.
- **Containers:** Docker, Docker Compose.
- **Cloud & DevOps:** AWS (ECS, Fargate, SQS, EventBridge, CloudWatch, CloudShell, RDS), GitLab CI/CD, CloudFlare
- **API Tools:** Postman (collections, environments, workspaces), Swagger (OpenAPI).

Soft skills: Leadership & Team Work, Problem solving, Time management, Communication, Presentations.
